

Progress 3 Test Case:

Result:

- My Art with Algorithms idea took over as the game I aimed to make for the major project. Currently I am using a text-based script to try and ask users for image files in the directory they have connected to the game. See the image below showing the first line outputted for the project currently:

```
Welcome to art with algorithms, brought to you by a voronoi art generator program!  
Please enter the file name (remember to attach the suffix of the image file and single quotation marks):
```

Start currently.

Reflection:

- The code ran but evidently has great room for growth, I feel adding greater ideas to the image generator would be wise to see various mathematical patterns within art. I believe this is well within MATLAB's scope and can be done quite easily with trial and error.
