

Progress 11 Test Case:

Result:

- Many new functions have been added to the application and it has since seen great amounts of progress. I forgot to mention within the previous progress write up that I ultimately decided to go with the language learning app due to the prior reasons (something I and others may use). If I had made a translator, I wouldn't stand any competition with other translator applications like DeepL and Google Translate. I also understand regardless of what I chose to do I wouldn't stand as competition or likely have anyone use the application, but I wanted to add a talking point on my resume. Due to the amount of progress, I am seeing because of getting use to appdesigner and the exposure I am undergoing, more progress files were uploaded in the repository for the project. I also tried utilising JavaScript due to my foundational knowledge in it and finding out that I could with appdesigner but ultimately didn't continue the endeavour.

Updated Home Screen.
