**Progress 14 Test Case:**

Result:

- I am very happy with the amount of progress I have seen within the last two days. The application has a huge number of new features and is working (for the most part). I have added more comments but still need far more in the code for the sake of grading. I have uploaded more photos on the new things added to the repository and am very pleased. The main issue I currently have is the challenge mode still is not working as I want it to. Other minor features like the music, slider and exit buttons are all working as hoped. The key things that I added were the story feature that now works properly and the challenge feature that has levels. I copied the way worked where the user is prompt to select one of three things.

New Home Screen, almost done.

Notes:

1. I want to change, the exit buttons positioning.
2. Challenge mode.
