Progress 4 Test Case:

Result:

- The code now runs and shows more output for the user to utilise, three different mathematical artistic layovers were made, but are struggling when outputting, see the images below of before and afters of the output images with Voronoi as the selected prompt.

Before   After

Reflection:

- The code has seen great improvement but is not correctly outputting what I want it to. Unfortunately, I am beginning to feel the art with algorithms idea may have been a little more challenging than anticipated. And if I want to apply the project to my resume, I firmly feel it should have value in helping others and myself, but the current idea and code doesn't do either of those things.
